Push-up Position

Correct Blade Tensioning Made Easy

Keeping your secondary cleaner correctly tensioned and operating at peak performance is easy with the Select Set Tensioner. This system helps to keep the cleaner blades in constant contact with the belt, limiting the amount of maintenance needed for re-tensioning the blades. When adjustment is needed, the job is a simple task. The Select Set is easy to access on the sides of the cleaner and re-tensioning blades can be done in minutes by simply loosening two bolts and turning the adjusting nut with a wrench. The durable steel, powder coated unit comes standard with all new Eliminator P, I and R-Type belt cleaners, or it can be ordered for any of these cleaners already in use.

Versatile Tensioner Conforms to Conveyor Structure Requirements

The Select Set™ Tensioner works with Eliminator® P-Type®, I-Type™ and R-Type® secondary cleaners to improve versatility and operating performance. The system allows users to position the adjusting bolts for tensioning the blade tips either below the cleaner pole for push-up tensioning, or above the pole as a pull-up tensioner. Some conveyor structures have space limitations, and some are blocked by obstructions. The versatility of the Select Set Tensioner allows the system to fit the needs of the conveyor, making it an easy-to-use solution for tensioning the cleaner.

P-Type® Cleaner with Select Set Tensioner

Other Key Features and Benefits:

- Compact. The pull-up tensioning position can be used in tight clearance applications.
- Less material build-up. For applications where the material quickly builds up on the cleaner, the tensioner can be positioned above the cleaner pole, in the pull-up position, and out of the way of the material flow.
- Easy to install. The tensioner is shipped assembled on the mounting brackets and ready to install. Simple step-by-step directions for using the tensioner in either position are included.
- Simple to use. Loosen the clamp block lock bolts and turn the adjusting bolt jam nuts for quick and easy tensioning and re-tensioning.
- Low maintenance. Few parts and heavy-duty construction ensure repair-free performance, and a long service life.
- Safe. All adjustments can be done from the sides of the conveyor.
- Fits all P, I & R-Type cleaners. Select Set Tensioner Kits are available for both standard and heavy-duty P, I, & R-Type cleaners.

Neoprene Cushions

Neoprene Cushions

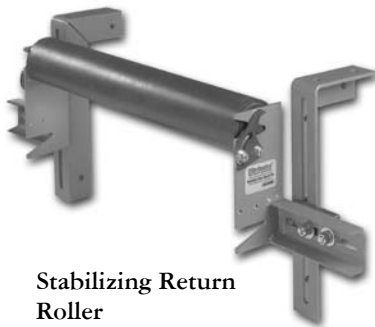

These specially formulated oil-resistant cushions for P-Type® and R-Type® cleaners are ideal for severe applications where oil and other chemicals make standard cushions unusable. Neoprene cushions come with red mounting plates for easy identification.

Genuine Replacement Parts

Keeping your cleaning systems operating at peak performance is easy with the use of genuine Eliminator® replacement parts. All blades and cushions are made from high quality, long-lasting components to exacting specifications. Flexco has everything to keep your cleaners operating at maximum efficiency. Use genuine Eliminator repair parts to ensure quality, performance and satisfaction. Ask for the Maintenance Made Easy Brochure for detailed replacement parts information.

Stabilizing Return
Roller

Stabilizing Return Roller

The Stabilizing Return Roller provides a simple way to boost secondary belt cleaner performance. Included are easy-to-use universal mounting brackets and either a 5" (125mm) CEMA D or heavy-duty 6" (150mm) CEMA E Exalon return roller. The roller holds the belt flat and stable to provide consistent cleanability and reduced cleaner maintenance. A Stabilizing Roller Bracket Kit is also available for use with your on-site return roller.
