

# MINELINE® MHS Secondary Cleaner with Service Advantage Cartridge™

## Service Advantage Cartridge™ — Product Highlights.

The new, patent pending, Service Advantage Cartridge™ is the next generation of slide-out cartridge cleaners in the proven line of belt cleaners from Flexco, the world leader in belt conveyor maintenance and repair solutions. The MHS Secondary Cleaner with the Service Advantage Cartridge, is the industry's first true slide-out cartridge cleaner that can be quickly and easily removed, even in the most dirty of conditions and after months of cleaning the belt.

**Tensioner Mounting Brackets** make installations fast and easy from the start, and prevent future problems.

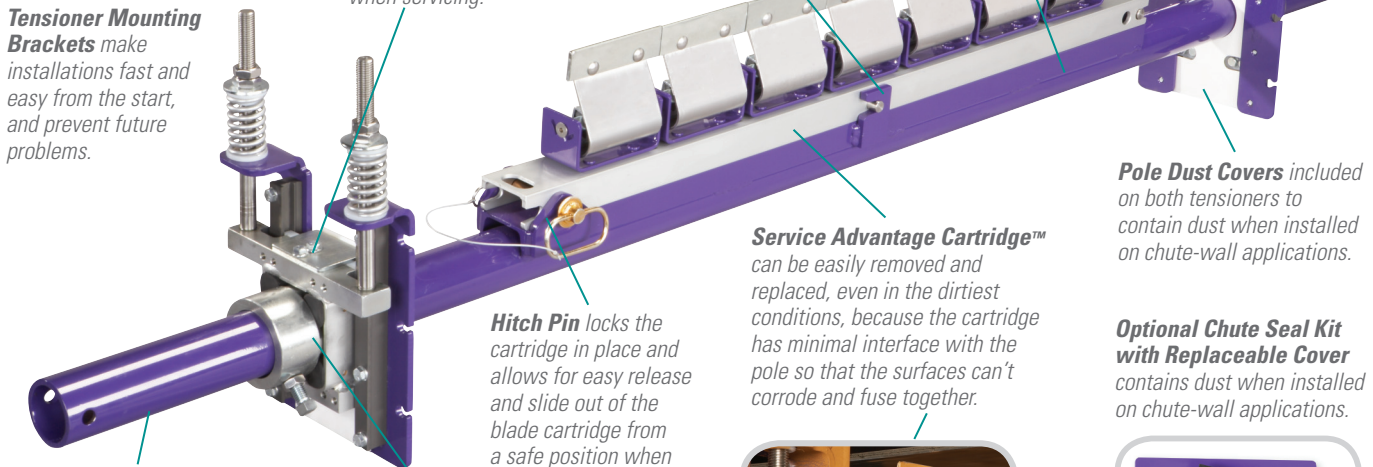

**Cartridge Ramp Kit** makes it easy to pull cartridge out when servicing.

**Durable** — engineered with an oversized pole and heavy-duty, corrosion-resistant steel parts to endure the high-duty cycles of high-speed beltlines.

**Pin Locks** positively secure the cartridge, while still allowing for easy changeouts; materials have fewer places for buildup.

**Limited Space SST Spring Tensioner** includes a visual "tension-check" feature for optimal blade tensioning at any time, and provides self-adjusting tension to ensure the blades maintain continuous blade-to-belt contact.

**Pole Dust Covers** included on both tensioners to contain dust when installed on chute-wall applications.

**Service Advantage Cartridge™** can be easily removed and replaced, even in the dirtiest conditions, because the cartridge has minimal interface with the pole so that the surfaces can't corrode and fuse together.

**Hitch Pin** locks the cartridge in place and allows for easy release and slide out of the blade cartridge from a safe position when maintenance is needed.

**Optional Chute Seal Kit with Replaceable Cover** contains dust when installed on chute-wall applications.

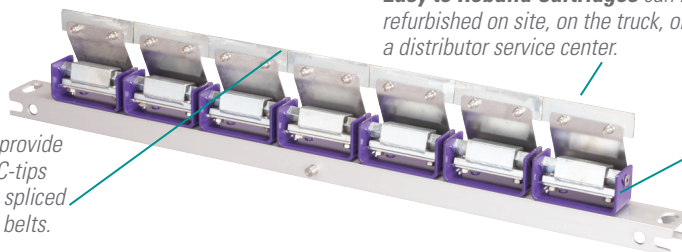

**CST Spring Tensioner** provides easy access to cartridge with self-adjusting tension to ensure the blades maintain optimum tension to the belt.

**Easy to Rebuild Cartridges** can be refurbished on site, on the truck, or at a distributor service center.

**Cartridge Removal Tool** stores conveniently in the pole for easy access when needed.

**Tough Carbide-Tipped Blades** provide long wear and efficient cleaning; C-tips are compatible with mechanically spliced belts while V-tips with vulcanized belts.

**PowerFlex™ Cushion** patented, segmented cushion design with two tensioning elements that control independent adjustment of each blade to the belt for efficient, thorough cleaning.
