

FLEXCO ESSENTIALS™ TRAINING SCHOOL

HEAVY-DUTY CONVEYOR SYSTEM ESSENTIALS

How are you training your team on the essentials of heavy-duty conveyor systems? A well-trained team helps your operations be more efficient, more productive and safer.

Join Flexco's heavy-duty experts in the classroom to learn about the key components of a heavy-duty conveyor system and how they work together to contribute to conveyor productivity, efficiency and safety.

The real-work focused content is dynamic and provides a compelling learning experience so new employees can get up to speed on the essentials of heavy-duty conveyor systems and speak the language of the conveyor.

AT THE HALF-DAY TRAINING, YOU WILL LEARN:

- The role that each key component plays in conveyor functionality and performance.
- How each component of the conveyor contributes to conveyor productivity, efficiency, and safety.
- The foundation of the conveyor system – structures and pulleys.
- Moving materials – the belts, the drive systems, and the idlers.
- Containing materials – the load zones and operational forces.
- Maximizing belt performance with belt trainers and belt cleaners.
- The pain points found on every conveyor system.

Each attendee also gets one-year access to Flexco Essentials eLearning – a \$299 value – to supplement the live training experience.

NOT JUST FOR NEW EMPLOYEES:

Refresh your knowledge, talk the same language, and learn expert tips alongside your new operators. Long-time operators and even managers can benefit from the Flexco Essentials eLearning course. There is always something new you can learn to improve productivity and efficiency, and your operation will always benefit from staying on top of safety with a focused and detailed approach to your conveyor systems.

2025 School Dates
